For this demo, we will follow the tutorial for analyzing single-cell RNA-seq data using Google Colab

Setting up
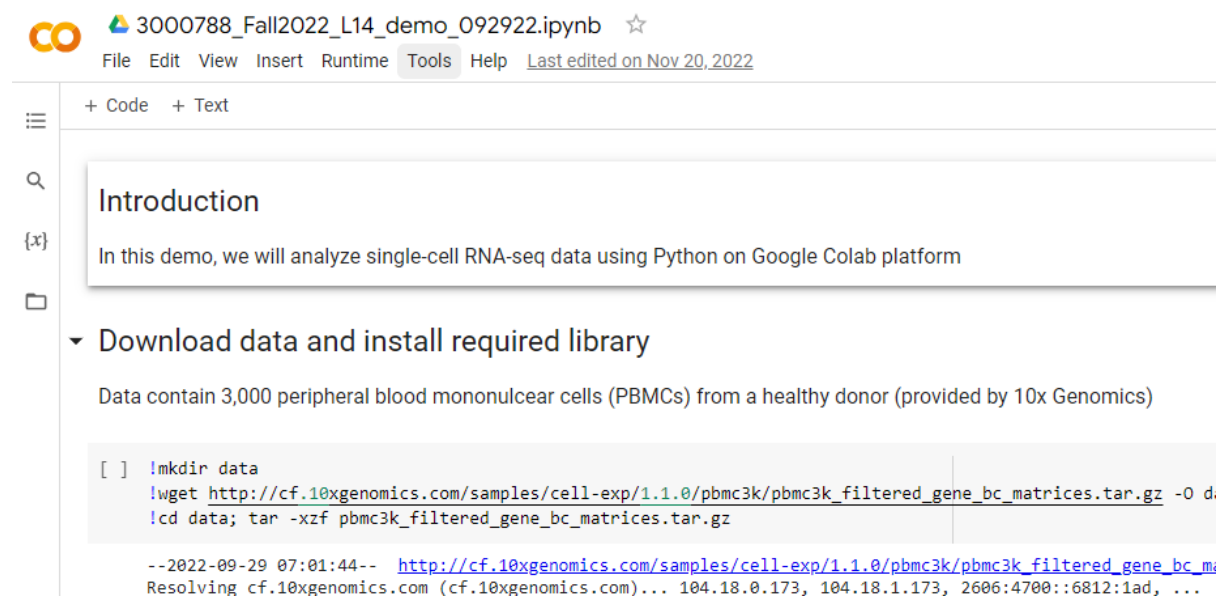

- Visit https://research.google.com/colaboratory/ to make sure that you can access Google Colab service.
- Make sure that you have **Google Drive** service.
- Download the demo script https://github.com/cmb-chula/comp-biol-3000788/blob/main/demo/3000788_Fall2023_L15_demo_100523.ipynb and upload it to your **Google Drive**.

Running the demo

1. Go to the demo file that you uploaded on Google Drive.
2. Right click on it to see the **Open with → Google Colab** option. Alternatively, you can just double-click the file.

3. Google Colab should open.

4. We will run the script and go over the outputs.
